Jessica Esmeralda Tello Arredondo

SENIOR UNITY DEVELOPER | GAMEPLAY, XR & REAL-TIME 3D

San Luis Potosí, Mexico | +52 487 109 5801 | jessicatello0101@gmail.com
linkedin.com/in/jessicatello | Portfolio | Open to remote roles and relocation

PROFESSIONAL SUMMARY

Senior Unity Developer with 6+ years of experience building, shipping, and supporting real-time 3D, multiplayer, and XR software. Hands-on Unity/C# engineering across gameplay systems, physics-driven simulations, reusable architecture, performance profiling, and cross-platform native integration. Built a four-player shooter prototype and industrial VR/AR applications; contributed to 7 public Epic Online Services Unity plugin releases in 14 months. Combines implementation and debugging with technical leadership, code reviews, and collaboration with 3D artists, animators, and UX/UI designers.

CORE COMPETENCIES

Unity & Gameplay: Unity 3D/2D, Unity 6, C#, gameplay systems, Character Controller, Unity Physics, Animator, UI, TextMesh Pro, additive scene management, locomotion, grabbing and manipulation

Programming & Architecture: C++, OOP, SOLID, MVC, state machines, Observer, dependency injection, ScriptableObjects, event-driven systems, reusable C# components, inverse kinematics

Multiplayer & Online Systems: Photon PUN 2, Photon RPCs, Custom Properties, movement/animation synchronization, room and match management, Epic Online Services (EOS), peer-to-peer functionality

XR & Performance: OpenXR, XR Interaction Toolkit, Meta XR/Oculus, SteamVR, AR Foundation, URP, Unity Profiler, CPU/GPU/memory profiling, draw calls, object pooling, baked lighting, occlusion culling, shader and scene-loading optimization

Native Integration & Quality: Native plugins, IL2CPP, Mono, Java/Kotlin, Android Studio, Gradle, AAR, JNI, Android NDK, CMake, adb, R8, REST APIs, Firebase, Unity Test Framework, unit/PlayMode/standalone tests, GitHub Actions, CI/CD, Git

Leadership & Delivery: Hands-on technical leadership, architecture/code reviews, mentoring, estimation, Agile/Scrum, QA/release validation, Azure DevOps, Jira, bilingual client communication

PROFESSIONAL EXPERIENCE

Senior Game Engineer | Apex Systems (Client: Epic Games) | *February 2025 - July 2026*

- Developed the EOS Unity plugin in C#/C++, integrating SDK versions and implementing cross-platform safeguards, configuration persistence, Android 16 KB memory-page support, and high-frequency peer-to-peer functionality.
- Contributed to 7 public production releases in 14 months and owned 1 end-to-end, covering implementation, testing, packaging, validation, and publication across Windows, Android, macOS, iOS, and Linux.
- Debugged managed/native boundaries, IL2CPP/Mono, authentication, platform loaders, dependencies, and builds across Unity LTS versions; diagnosed an Android DEX failure involving JDK 21+ AAR bytecode and R8.
- Implemented Java/Kotlin Android integration using AndroidManifest, Gradle, AAR, JNI, Android NDK, CMake, adb, and Android Studio; resolved platform-specific build failures tied to EOS_DISABLE.
- Maintained compilation, unit, PlayMode, standalone, and GitHub Actions CI workflows; detected a macOS regression before release and handled approximately 12 developer-reported issues monthly through root-cause analysis, fixes, and documentation.

Senior Unity Developer / Technical Lead | Yeltic | *January 2024 - January 2025*

- Led architecture and delivery of 4 client-used Unity projects while remaining hands-on in C# development, XR integration, troubleshooting, and validation of critical systems.
- Built reusable interaction, scene-organization, telemetry, scoring, reporting, persistence, and backend systems using OpenXR, XR Interaction Toolkit, SteamVR, and Meta XR.
- Integrated Azure and Firebase through C# SDKs and REST APIs for authentication, user activity, persistent data, cloud storage, and reporting.
- Coordinated 6 developers, UX/UI designers, and 3D artists; owned estimates, code reviews, architecture approval, QA, and delivery, translating client requirements into implementation tasks in English and Spanish.

Industrial Development Lead | Fyware | *January 2021 - October 2023*

- Promoted after one year; remained hands-on in Unity/XR development while leading up to 15 Unity developers, 3D artists, animators, and UX/UI designers across as many as 6 concurrent projects.
- Defined and reviewed reusable architectures using MVC, state machines, Observer, dependency injection, and ScriptableObjects; owned technical decisions for SDKs, plugins, hardware, and implementation.
- Contributed to approximately 17 client-deployed XR projects across industrial training, robotics, safety, and other sectors; delivered an XR solution used to train 180 plant employees.
- Led technical implementation and delivery of simulations with telemetry, scoring, APIs, persistence, controllers, and haptics; coordinated code reviews, build validation, QA, client acceptance, and post-release support.
- Introduced Scrum, SOLID, coding standards, branching strategies, testing checklists, and reusable project templates; mentored engineers and resolved technical risks and delivery blockers.

Unity Developer | Fyware | *December 2019 - January 2021*

- Developed end-to-end Unity/C# VR and AR applications with locomotion, grabbing, physics, machinery simulations, guided procedures, UI flows, animations, telemetry, scoring, persistence, and REST API integrations.
- Built a confidential multiplayer XR experience for 2-4 simultaneous participants and reusable state-driven, event-driven, telemetry, and scoring components adopted in subsequent projects.
- Integrated 3D models, animations, controllers, haptic devices, cameras, and XR hardware in collaboration with the technical lead and creative disciplines.
- Used Unity Profiler to diagnose rendering, CPU, GPU, and memory bottlenecks; optimized draw calls, models, baked lighting, occlusion culling, object pooling, shaders, memory, and scene loading, and authored an internal XR optimization guide.

SELECTED TECHNICAL PROJECTS

- **Shooter Arena | Multiplayer Gameplay Prototype:** Built a playable four-player Windows shooter in Unity 6, C#, Photon PUN 2, and URP. Implemented named rooms, exclusive character selection, network spawning, interpolated movement/rotation, synchronized animations, projectile collisions and damage RPCs, health, respawning, victory/defeat flow, UI, and additive scene management. Prototype under continuous improvement.
- **Forklift Operation Training | Physics-Driven VR:** Sole Unity/XR developer with complete PoC ownership for HTC Vive Pro/PCVR. Implemented steering, acceleration, braking, fork controls, load pickup/delivery, weight-dependent dynamics and dynamic center of mass, collision penalties, route validation, feedback, performance tuning, and VR comfort refinements.
- **LOTO Safety Training | Standalone XR:** Implemented ordered procedural interaction, required-step validation, blocked invalid actions, and immediate feedback in Unity/C# for Meta Quest 2/OpenXR. Adapted MRTK-based interaction patterns and integrated industrial models and baked lighting for standalone performance.
- **UR5 Robotic Arm Simulation | AR & 3D Mathematics:** Built a mobile AR prototype with Unity/C# and AR Foundation, translating interactive end-effector targets through inverse-kinematics calculations into continuously updated joint positions, rotations, and real-time visualization.

EDUCATION, LANGUAGES & RESEARCH

Bachelor's Degree in Mechatronics Engineering | Universidad Autónoma de San Luis Potosí, Campus Zona Media | August 2014 - May 2019

Languages: Spanish (native); English (professional working proficiency; client-facing technical communication)

Research: Manipulation of Virtual Objects in the Oculus Rift System for Mechanical Assemblies - Verano de la Ciencia 2018; presented at the 6th Young Researchers Meeting, 2018

PLATFORMS & XR HARDWARE

Validated EOS plugin platforms: Windows, Android, macOS, iOS, Linux. **Additional platforms listed in professional background:** WebGL, Nintendo Switch, Xbox, PlayStation.

XR devices: Meta/Oculus Quest and Quest 2, Oculus Rift, HTC Vive/Vive Pro, Microsoft HoloLens. **XR targets:** PCVR, standalone VR, mobile AR, mixed reality.
